# Theming Angular Material

## **Primary palette**

- Widley used

## **Accent palette**

- Interactive elements

## **Warn palette**

- Error states

## **Foreground palette**

- Text and icons

## **Background palette**

- Element backgrounds

# Prebuilt Themes

## Applying a theme

- styles.css / styles.scss

## @angular/ material/prebuilt-themes

- deeppurple-amber.css
- indigo-pink.css
- pink-bluegrey.css
- purple-green.css

# Custom Themes

## **Imports the mat-core() sass mixin**

- Includes all common styles
- styles.css / styles.scss

## **Defines a theme data structure**

- Composes multiple palettes
- mat-light-theme or mat-dark-theme

# Custom Theme

```
@use '@angular/material' as mat;  
@include mat.core();  
  
$candy-app-primary: mat.define-palette(mat.$indigo-palette);  
$candy-app-accent: mat.define-palette(mat.$pink-palette, A200, A100, A400);  
  
$candy-app-warn: mat.define-palette(mat.$red-palette);  
  
$candy-app-theme: mat.define-light-theme(  
  $candy-app-primary,  
  $candy-app-accent,  
  $candy-app-warn);  
  
@include mat.all-component-themes($candy-app-theme);
```

# Summary

## Theming

- Prebuilt themes
- Custom themes
  - Import mat-core()
  - Defines a theme data structure
  - Multiple themes

## Direction

- Bind dir attribute (RTL / LTR)

Final words.
